

HO VAN PHUOC

Software / Data Platform Engineer

✉ vanphuoc3012@gmail.com ☎ (+84) 34 441 5562 📍 Ho Chi Minh City
🌐 [LinkedIn](https://www.linkedin.com/in/vanphuoc3012) 🐙 github.com/vanphuoc3012

Skills

Languages: Java, Kotlin, Go, Python, TypeScript **Databases:** PostgreSQL, MySQL, Redis, HBase

Data & Lakehouse: StarRocks, Spark, Kyuubi, Flink, Kafka, Iceberg

Cloud & DevOps: Kubernetes (GKE/EKS), Docker, Helm, ArgoCD, Bazel, Pulumi **Monitoring:** Victoria-Metrics, Grafana

Others: Git, CI/CD, CCNA **Spoken:** Vietnamese, English

Education

Bach Khoa University, Ho Chi Minh City (2024–present)

Master of Computer Science (in progress)

Bach Khoa University, Ho Chi Minh City (2017–2022)

Bachelor of Chemical Engineering • GPA: 8.0/10

Experience

Software Engineer → Data Platform / Cloud Infrastructure Engineer

Nov 2023 – present • MoMo (M_Service JSC), Vietnam

Started as a junior software engineer building app features, then moved into designing and running MoMo's data platform used by many teams.

Product work (early)

- Built MoMo's in-app **survey feature** end to end, from the admin setup to the screens in the app. Added **extensible question types**, survey versions, next-question logic, and reports with charts and export, and sent the survey data to Kafka and StarRocks. (*Kotlin, Kafka, StarRocks*)
- Built the backend for the **Lắc Xì 2024** Tết game, made to handle **very high traffic and many users at the same time**: game logic, caching, a global lock, maintenance mode, event/chat sending, and a back-office config tool. (*Vert.x, Kotlin, HBase, Redis, Kafka*)

Data platform work

- **Designed the data platform architecture** — how it is deployed, how the clusters are set up, and how people access data.
- Was the **first engineer** to research and build the deployment pipeline for the data platform.
- Also worked as a **DevOps engineer** for a while: supported CI/CD, networking, and troubleshooting of multi-cluster networking, and operated several open-source stacks (Postgres, VictoriaMetrics + Grafana).
- Liked to **try and apply new tools** — tested new open-source tech and brought the good ones into production for the company.
- Brought an **open-source lakehouse** to the company (StarRocks, Apache Kyuubi, Spark, Iceberg, Gravitino, Hive Metastore) to run data pipelines and build a **feature mart** for ML.
- Enabled **BI and blazing-fast, real-time dashboards** that help the business make decisions in real time.
- **Helped many teams go live** — set them up on the platform and gave them the tools and support to ship to production.
- Set up and ran **multi-cluster Apache Flink** and streaming/CDC pipelines (Kafka, Debezium) for several teams.
- Served many kinds of users — developers, data analysts, data scientists and product owners.
- Built easy **self-service data tools and MCP servers** (StarRocks, Grafana, VictoriaLogs) so AI tools and non-technical users can get data and insights on their own; also built an **AI agent** (Node/TypeScript) to query and explore the data platform.
- Added **data security, access control and audit** to keep data safe.
- Ran workloads on **Kubernetes across three clouds** — GKE (GCP), EKS (AWS) and FPT Cloud — managing node pools, Helm charts, ArgoCD and Kyverno.
- Worked with **Bazel** to build and package services, and upgraded the whole **monorepo from Java 11 to Java 17** (build config + hundreds of dependencies).
- Can set up a **full monitoring stack for Kubernetes** — metrics, dashboards and alerts — using Victoria-Metrics/VictoriaLogs and Grafana; managed secrets and access with SOPS and GCP Workload Identity.
- Wrote platform services in **Kotlin, Go and Python**.

Environment: Kotlin, Go, Python, TypeScript, Kubernetes (GKE/EKS/FPT Cloud), Helm, ArgoCD, Kyverno, Bazel, Pulumi, StarRocks, Kyuubi, Spark, Flink, Kafka, Debezium, Iceberg, Gravitino, HBase, Redis; GCP, AWS, FPT Cloud

Java Developer

04/2023 – 10/2023 • Shinhan DS Vietnam Ltd

- Built backend APIs for an internal HRMS (Employee Management, Leave & Attendance, Payroll, etc.) using Java, Spring Boot, Spring Data JPA.
- Set up a CI/CD pipeline (Jenkins, Docker, Apache on CentOS) for the test environment.
- Worked on a BigCommerce admin site (Madive) and took part in team code reviews.

Developer Internship

12/2022 – 03/2023 • LIKELION Co., LTD.

- Contribute to Spring Boot web application development.
- Server-side rendering web using Java, Thymeleaf, HTML, jQuery, Bootstrap.
- Build small project with team of 5 members.
- Learning new technology: Docker, Redis, Microservices.

Personal Projects

Chat Application

- Github: <https://github.com/vanphuoc3012/chat-application>
- A realtime Chat Application: send messages, create chat groups.
- RabbitMQ as STOMP broker; Redis as in-memory session store.

Environment: Java 11, Spring Boot, Docker, RabbitMQ, Redis, Oracle Database

Ecommerce – Laptop shopping website

- Github: https://github.com/vanphuoc3012/xplaptop_web
- A shopping website that lets customers browse products and place orders.
- An admin application for managing users, categories, brands, products, customers, orders and sales reports.

Environment: Java 11, Spring Boot, MySQL

Extra Curricular

Leadership in University (2017–2020)

Deputy Secretary of the Youth Union & Faculty Students' Association; organized a Careers Expo, academic contests and volunteer campaigns.

Achievements & Certificates

🏆 **Jun 2022** — Completed CCNA class at VNPRO Center.

🏆 **Apr 2018** — 1st prize, National Chemistry Olympiad for Students 2018.
